The Earth In The Solar System

Define the following terms:-

- | | |
|---------------------|--------------|
| a) Orbit- | d) Satellite |
| b) Meteoroids | e) Comets |
| c) Celestial bodies | |

Give one word answers:-

- Blue planet of the solar system
- The largest planet of our solar system
- Another name for Milkyway
- The two planets between which the Saturn lies.
- The smallest planet in the solar system
- Constellation that helps us locate the Pole Star.

Indicate if the statements are True or False:-

- Asteroids are thought to be pieces of a large planet which exploded
- The sun is the biggest star in the universe
- Planets move around the sun in circular orbits
- The solar system consists of the sun and the eight planets
- Uranus has the most number of satellites in our solar system
- Hydrogen and helium gases are found on the sun.

Name all the planets according to their size.

Why is Earth known as 'Blue Planet'?

Match the following:

Column - A

- The star nearest to earth
- Planet with the largest orbit
- Red planet
- Celestial body closest to earth
- Planet surrounded by prominent rings.

Column - B

- Moon
- Saturn
- Sun
- Mars
- Neptune
